

Sergei Karukes

Senior / Lead React Native Engineer

Kazan, Russia | +7 906 266-51-15 | ser1888kg@gmail.com | t.me/ser1888

PROFESSIONAL SUMMARY

Senior/Lead mobile engineer with 8+ years in software development and 5+ years of hands-on React Native experience. Builds production iOS and Android applications, shared platform modules, and native integrations using TypeScript/JavaScript, Kotlin/Java, and Swift/Objective-C.

Takes systems from ambiguous product ideas and technical design through delivery, production debugging, releases, and iteration. Recent work includes evolving a feature-based codebase across iOS, Android, Web, and Electron with explicit module boundaries, secure OIDC flows, real-time communication, offline persistence, and strict quality gates. Leads engineers, reviews code, and partners closely with Product, Design, Backend, and Mobile teams.

CORE EXPERTISE

React Native & platforms: React Native, TypeScript, JavaScript, Redux Toolkit / RTK Query, React Navigation, Hermes, Reanimated; iOS, Android, Web, Electron

Native & integrations: Kotlin, Java, Swift, Objective-C; AIDL, Android Services / Broadcasts, WebRTC, APNs / FCM / VoIP Push, REST, WebSocket, deep links / universal links

Architecture & security: modular feature-based systems, explicit contracts and boundaries, platform adapters, Clean Architecture, MVVM / MVP, OIDC / OAuth 2.0 + PKCE, Keychain / safeStorage

Data & reliability: Realm, SQLite, Room, IndexedDB, offline-first synchronization, crash and memory-leak diagnostics, performance optimization

Quality & delivery: Jest, React Native Testing Library, unit / e2e / A/B testing, strict TypeScript / ESLint, architecture checks, Gradle / Xcode, release management, code review

AI-assisted engineering: Codex for code analysis, refactoring, and review with mandatory test, type-check, lint, and architecture validation gates

PROFESSIONAL EXPERIENCE

Vinteo — Team Lead React Native Engineer

Sep 2024 — Present

Team Lead since Oct 2025; previously Senior React Native Engineer · Krasnodar / remote

- Set React Native technical direction, turn ambiguous product needs into executable plans, review code, mentor engineers, and coordinate delivery with Design, Backend, and adjacent teams.
- Evolve Vinteo Chat's modular feature-based architecture with explicit public contracts, enforced cross-module boundaries, shared UI/services, and platform adapters.
- Extended one React codebase across iOS, Android, Web, and Electron while reusing Redux/RTK Query, WebSocket, i18n, domain models, and most hooks behind platform-specific boundaries.
- Implemented secure OIDC Authorization Code + PKCE flows and platform-appropriate session storage: Keychain on mobile, sessionStorage on Web, and Electron safeStorage with a secure fallback.
- Build real-time WebRTC calling (SFU/MCU), connection recovery across network changes, and screen/HDMI sharing; support PiP, AirPlay, second displays, and Android TV.
- Integrated AIDL, Android Services/Broadcasts, APNs/FCM/VoIP Push, and deep/universal links; diagnosed memory leaks and crashes and upgraded React Native and core libraries.
- Established strict engineering gates—lint, type-check, tests, dependency-cycle and architecture-boundary checks—and own release management and version delivery.

Muse Group — React Native Developer

May 2021 — Sep 2024

Monetization team · Cyprus / remote

- Owned architecture and production reliability for the advertising platform in Ultimate Guitar and other consumer apps across a shared React Native layer and native iOS/Android code.
- Integrated and maintained third-party advertising SDKs, designed adapters and experiments, and delivered A/B and end-to-end testing for new features.
- Designed advertising analytics and investigated crashes, memory leaks, and performance bottlenecks to reduce failures in the monetization module.
- Documented technical decisions, planned work in Agile/Scrum, conducted cross-team reviews, and collaborated with managers and external vendors in English.

O! Mobile Operator — Middle Android / iOS Developer

Dec 2019 — Jun 2021

Telecom and payment services · Bishkek

- Delivered Android/iOS customer journeys including payment history, profile management, and widgets.
- Helped migrate a legacy application to MVVM, redesign core screens, and define the target architecture.
- Wrote unit tests, estimated and planned work, and aligned requirements with product managers and designers.

Inobi — Android Developer

Apr 2019 — Dec 2019

Olympic Council of Asia project · Bishkek

- Designed the MVVM architecture, contributed to product design and MVP delivery, and published the application to Google Play.

TimelySoft — Junior Android Developer

Sep 2018 — Apr 2019

Warehouse application for Imperia Pizza · Bishkek

- Built offline-first data synchronization and QR/barcode scanner support, then tested the solution in the customer's production environment.

CS-Soft — Intern / Junior Android Developer

Mar 2018 — Aug 2018

Bishkek

- Maintained a legacy Android application, fixed defects, and extended existing features.

EDUCATION

Kyrgyz State Technical University — Information Systems and Technologies, university coursework (part-time), 2022

Kyrgyz State Technical University — Information Security, university coursework, 2018

LANGUAGES

Russian — native

English — B2+ / professional working proficiency: technical discussions, documentation, and external partner communication

ADDITIONAL

Redmouse courses: Java & Android; HTML + CSS (2016)
